

MICROBEAD-FREE WATERS ACT OF 2015

President Obama signed the Microbead-Free Waters Act into law in December 2015. The Act will prohibit the sale of personal care products containing plastic microbeads by July 1, 2018.

How will this law affect you?

Microbeads

Microbeads are tiny (< 5mm) plastic beads found in face washes, body scrubs, and toothpastes for abrasive and decorative purposes. Microbeads are too tiny to be filtered by wastewater treatment processes, so they end up being directly discharged into waterways, causing pollution and harm to marine life.

Law

The Microbead-Free Waters Act bans **RINSE OFF** cosmetic products, such as scrubs and toothpaste. The law does not ban products such as creams, fillers, and cleaning products.

Issues

The federal law preempts bad state laws, the ones that contain the "biodegradable loophole." However, the preemption may raise issues for municipalities with more aggressive implementation timelines.

Environment

Banning microbeads will reduce plastic pollution in the marine environment. While this law will not solve the entire problem, it is a great start to eliminating other sources of microplastic and plastic pollution.

Smart Shopper

Products containing microbeads will remain on the shelf until July 1, 2018. Microbeads will remain in creams, fillers, and cleaning products. Read the ingredients list on the box carefully, if you see polyethylene or polypropylene then that product contains microbeads. Shop for natural alternatives and spread the word! **BE A SMART SHOPPER!**
