Fake grass, real danger.  

Artificial turf isn't just plastic, it's a toxic heat trap that can be hotter than asphalt. On a 96°F day, artificial turf can reach temperatures of up to 158°F, putting athletes at serious risk of heat stroke and dehydration.

A regular sized artificial turf field contains 40,000 lbs of plastic, including plastic turf blades that contain chemicals like #PFAS that are harmful to us and the environment. And that crumb rubber between the blades? It's not just gross, it's hazardous if ingested and contains known carcinogens.

Join us and send a message to YOUR TOWN in NJ telling them to opt for safer, cooler (and cheaper!) natural grass alternatives at the link in bio! sc.org/NoToxicTurfNJ
